

Be a purchasing agent, not a re-purchasing agent...

Americase HM224B Super Box

"Industry leading quality built for longevity"

Engineered to Last:

Americase designs and manufactures the highest quality HM224B container on the market. We design our cases to exceed the rigorous requirements of the ATA300 CAT1 standards so that they stay in circulation far longer than lower priced, lower quality product—we call this value engineering.

Quality Costs:

The value of a product is ultimately determined over the lifetime of the products use. We understand that lower-priced products that last half as long are ultimately a poor purchase decision.

At Americase we elected to engineer our products to the highest specifications so that the value of our case would be seen through their longevity in the field. Would you pay 8% more for a product that stays in the field twice as long?

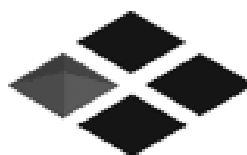

A lower-priced product is a value **ONLY** if it is purchased once.

- All Aluminum Exterior
- Over 1,000 industrial-grade rivets
- Highest quality hardware
- Designed to exceed ATA300 CAT1

While we cannot compete with all of our competitors in price, none of our competitors can compete with us in quality and value.
